Nouvelle collection de lunettes PAISLEY par OKIA 2011

OKIA PRESENTS PAISLEY, ITS LATEST AMAZING COLLECTION ENTIRELY CREATED BY THE INNOVATIVE HDA® TECHNOLOGY

OKIA makes a loud comeback with its new eccentric **Paisley collection**, utterly created by the well-consolidated **HDA® Technology**.

Always true to type, OKIA keeps on amazing its clients with creations which do not have any equal in terms of innovation, originality and unlimited amusement. The proposed new models show all the typical patterns of the Brand: colour, cheerfulness, light-heartedness and extravagance. These frames are not suitable for those people who follow the classical and traditional style or the current established fashion dictate: on the contrary, they require the wearers to have a totally unconventional and original personality, both in spirit and look, proud to be unavoidably eye-catching.

From the bridge to the end tips, these glasses show a real explosion of brightness by means of the HDA® patterns and gradient colours spread all over the frame. **BMT technique**, the special process which allows ultra-sharp cutting for all decorations and gives them a strong metallic touch, is well visible along the whole length of the temples, always matching with the already mentioned HDA® patterns.

Let your spirit out and get involved by the exhilarating style of Paisley Collection by OKIA. Don't be one among many, be the one!
